Sandpaper and glasspaper are names used for a type of coated abrasive that consists of sheets of paper or cloth with abrasive material glued to one face. Despite the use of the names neither sand nor glass are now used in the manufacture of these products as they have been replaced by other abrasives such as aluminium oxide or silicon carbide.

**Sandpaper - Wikipedia**

Paper is a thin material produced by pressing together moist fibres of cellulose pulp derived from wood, rags or grasses, and drying them into flexible sheets. It is a versatile material with many uses, including writing, printing, packaging, cleaning, decorating, and a number of industrial and construction processes. Papers are essential in legal or non-legal documentation.

The first five years of life are critical to a child's lifelong development. Young children's earliest experiences actually influence brain development, establishing the neural connections that provide the foundation for language, reasoning, problem solving, social skills, behaviour and emotional health.
