

disinfection sterilization and preservation pdf

A widely used method for heat sterilization is the autoclave, sometimes called a converter or steam sterilizer. Autoclaves use steam heated to 121–134 °C (250–273 °F) under pressure. To achieve sterility, the article is placed in a chamber and heated by injected steam until the article reaches a temperature and time setpoint.

Sterilization (microbiology) - Wikipedia

Well disinfection, shocking, & restoration procedures to provide potable, sanitary water for difficult cases: this article describes procedures recommended by the BC Canada Ministry of Health & other expert sources to improve the chances of a successful well disinfection following area flooding or when the well casing has been contaminated with a biofilm or mineral deposits.

Flooded or Problems Well Disinfection Procedures, How to

Water purification is the process of removing undesirable chemicals, biological contaminants, suspended solids and gases from water. The goal is to produce water fit for a specific purpose. Most water is disinfected for human consumption (drinking water), but water purification may also be designed for a variety of other purposes, including fulfilling the requirements of medical ...
