Geology (from the Ancient Greek  $\gamma\alpha\iota$  ("earth") and  $\logia$  ("study of", "discourse")) is an earth science concerned with the solid Earth, the rocks of which it is composed, and the processes by which they change over time. Geology can also refer to the study of the solid features of any terrestrial planet or natural satellite such as Mars or the Moon.

RRC in collaboration with the University of Trás-os-Montes and Alto Douro, have been working to create a new, free application to record River Habitat Survey (RHS) sites in the field, using your smartphone. It works on Android phones and tablets, and the simple interface makes it easy to input data similar to how you would have originally completed the paper form.

### **River Habitat Survey**

Most of the mantle is within the field of diamond stability. The crust, which is normally too thin (usually less than 40 km thick) to lie within this field, can do so only if it has been thickened by the geologic processes related to plate tectonics. Yet diamonds are very rare because the mantle has a relatively low abundance of carbon.

"Every Rock Has A Story" Rocks are composed of chemical compounds naturally occurring in nature. Rocks are composed of particles ranging from microscopic grains to full sized crystals and crystal grains of different kinds of minerals, and containing many different identifiable physical characteristics. It is conceptually important that each rock has an origin in concepts of place, time, and ...
