a wave feels a tidal gravitational force that acts perpendicular to the waves direction of propagation; these forces change the distance between points, and the size of the changes is proportional to the distance between the points.

Vienna, Einstein started to think about gravitational waves when he worked on the Entwurf theory. In the discussion after Einstein's 1913 Vienna talk, Max Born asked Einstein about the speed of propagation of gravitation, whether the speed would be that of the velocity of light.

The basics of gravitational wave theory  $4 M_{\odot} = 1476.63 \text{ meters} \approx 1.5 \text{ kilometers} = 4.92549 \times 10^6$  seconds  $\approx 5$  microseconds. ( $M_{\odot}$  is one solar mass.) We occasionally restore factors of  $G$  and  $c$  to write certain formulae in normal units. Section 2 provides an introduction to linearized gravity, deriving the most basic properties of GWs.

Gravitational waves are ripples in space-time itself. It is generated when strong fields of gravity change in periodic or non-periodic ways. This causes ripples in space-time, almost like a pebble dropped in a pond will cause ripples on an otherwise smooth surface.

Einstein (1918) derived the quadrupole formula for gravitational radiation by solving the linearized field equations with a source term: "This solution suggests that the wave amplitude is proportional to the second time

generation of gravitational waves from a simple astrophysical source: a binary star system. In particular, we estimate the amplitude and frequency from e.g. a binary neutron star system, and demonstrate that any gravitational waves detected at the Earth from such an astrophysical source will be extremely weak.

Gravitational waves are 'ripples' in the fabric of space-time caused by some of the most violent and energetic processes in the Universe. Albert Einstein predicted the existence of gravitational waves in 1916 in his general theory of relativity.

Einstein was not quite sure about these waves. In 1916, he told Karl Schwarzschild, the discoverer of black holes, that gravitational waves did not exist, then said they did.
