The physics of magnetic resonance imaging (MRI) involves the interaction of biological tissue with electromagnetic fields. MRI is a medical imaging technique used in radiology to investigate the anatomy and physiology of the body. The human body is largely composed of water molecules, each containing two hydrogen nuclei, or protons. When inside the magnetic field ( $B_0$ ) of the scanner, the ...

Measurement. Ejection fraction is commonly measured by echocardiography, although cardiac magnetic resonance imaging (MRI), cardiac computed tomography, ventriculography and nuclear medicine (gated SPECT and radionuclide angiography) scans may also be used. Measurements by different modalities are not interchangeable. Historically, the gold standard for measurement of the ejection fraction was ...

These operators will "operate" on a wave function,  $\Psi$ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.

If a someone is to help you understand FRACTAL FIELDS- centripetal life force and biologic rejuvenation ( commercial proof it works: theraphi.net)- you will definitely need a scientist who knows why an object falls to the ground (thus excluding Einstein and Stephen Hawkins). Gravity is a centripetal electrical force.

1. Introduction A wide variety of materials combines viscous behaviours with transverse isotropy. Examples of these are soft tissues in humans, animals or plants (Zulliger et al., 2004, Gasser et al., 2006, Wang et al., 2014). The mechanical behaviour exhibited by these soft tissues is known to involve complex phenomena such as large deformation and nonlinear response.
