Ventilation is the intentional introduction of ambient air into a space and is mainly used to control indoor air quality by diluting and displacing indoor pollutants; it can also be used for purposes of thermal comfort or dehumidification. The correct introduction of ambient air will help to achieve desired indoor comfort levels although the measure of an ideal comfort level varies from ...

Very little energy is needed to make a well-designed house comfortable. Appropriate insulation, which is

essential for a comfortable house, combined with passive solar design and a draught-proofed building, can create low or even no energy requirements for heating and cooling (see Passive solar heating; Insulation). Highly efficient homes with no heating or cooling input are possible across ...
