The number needed to treat (NNT) is an epidemiological measure used in communicating the effectiveness of a health-care intervention, typically a treatment with medication. The NNT is the average number of patients who need to be treated to prevent one additional bad outcome (e.g. the number of patients that need to be treated for one of them to benefit compared with a control in a clinical trial).

Number needed to treat - Wikipedia

This report highlights the key gaps in impact and country results and shows how WHO is working with countries and partners to address these gaps to achieve the Fast-Track targets by 2020 and contribute to attaining the Sustainable Development Goals.
