Welcome. IEEE-NANOMED is one of the premier annual events organized by the IEEE Nanotechnology Council to bring together physicians, scientists and engineers alike from all over the world and every sector of academy and industry, working at advancement of basic and clinical research in medical and biological sciences using nano/molecular and engineering methods.

Microelectromechanical systems (MEMS, also written as micro-electro-mechanical, MicroElectroMechanical or microelectronic and microelectromechanical systems and the related micromechatronics) is the technology of microscopic devices, particularly those with moving parts. It merges at the nano-scale into nanoelectromechanical systems (NEMS) and nanotechnology.

Introduction We hope this page will eventually contain all the known data about the SU-8 photoresist. Thus, we need your help! Send all your data number 548, and I will include it in this page, with credits, of course! The SU-8 is a negative, epoxy-type, near-UV photoresist based on EPON SU-8 epoxy resin (from Shell Chemical) that has been originally developed, and patented (US Patent No ...

A cantilever is a rigid structural element, such as a beam or a plate, anchored at one end to a (usually vertical) support from which it protrudes; this connection could also be perpendicular to a flat, vertical surface such as a wall. Cantilevers can also be constructed with trusses or slabs. When subjected to a structural load, the cantilever carries the load to the support where it is forced ...

IEEE Sensors Council publishes "A 128<sup>Å</sup>—1 Pixels, High Dynamic Range SPAD Imager in 0.18 Åµm CMOS Technology" presentation by Cheng Mao, Xiangshun Kong, Haowen Ma, Limin Zhang, Feng Yan, and Xiaofeng Bu from Nanjing University, China." SPAD imager is proposed to achieve high dynamic range image. A SPAD chip with 128<sup>Å</sup>—1 pixels in 0.18 Åµm CMOS process is presented to show the feasibility.

The rise of small-scale, portable electronics and wearable devices has boosted the desire for ways to harvest energy from mechanical motion. Such approaches could be used to provide battery-free power with a small footprint. Kim et al. present an energy harvester made from carbon nanotube yarn that converts mechanical energy into electrical energy from both torsional and tensile motion.
