CHAPTER 15, Water and Aqueous Systems (continued) 6. Circle the letter next to each sentence that describes a result of the surface tension of water. a. In a full glass of water, the water surface seems to bulge over the rim of the glass. b. Water beads up into small, nearly spherical drops on a paper towel.

SECTION 15.1 WATER AND ITS PROPERTIES (pages 445-449)

The Water Molecule: a Review Water is a simple tri-atomic molecule, H_2O Each O-H bond is highly polar, because of the high electronegativity of the oxygen (N, O, F, and Cl have high values) bond angle of water = 105° due to the bent shape, the O-H bond polarities do not cancel. This means: water is a polar molecule.

Water and Aqueous Systems

Water and aqueous systems are widely used in metrology, which is a major focus of the National Institute of Standards and Technology (NIST). Standards such as those produced by IAPWS can be used to calibrate instruments and validate protocols.

CHEMISTRY NOTES CHAPTERS 17 AND 18 Water and Aqueous

water chemistry is concerned principally with reactions that occur in relatively dilute aqueous solution, although some natural waters have rather high solute concentrations. The reacting systems of interest are generally heterogeneous-that is, they involve both a liquid phase and a solid or a gaseous phase, or all three.
